UNIVERSITY OF INFORMATION TECHNOLOGY
FACULTY OF INFORMATION SYSTEMS

Introduction to the course

# Database System Design, Management and Administration

Dr. Cao Thi Nhan

# INTRODUCTION

1. Course name: Database Systems Design, Management and Administration
2. Credits: 4 (3 lectures – 1 lab)
3. Course description
4. Contents
5. Requirements and Expectations
6. Assessment
7. References

# Course description

- The course introduces theoretical aspects and business applications of data models and databases.
  - Analysis, design, and implementation of a database system using advanced DBMS tools and high-level languages to retrieve and manipulate data.
  - Data Security, maintaining database integrity, and database administration in a shared, networked or distributed environment.
  - Related database concepts including object-oriented databases and web database development.

# Content

1. Advanced SQL
2. Distributed Database
3. Object Oriented Database
4. Database and the Internet: The Web and Data Management
5. Database Administration

# Requirements and Expectations

- Preparation
- Attendance (NOT absent over 2 class sessions)
- Group discussion
- Homework

# Assessment

1. Midterm exam: 20%
2. Computer based test: 30%
3. Final exam: 50%
4. Bonus score: Max +5% to [2]
   - Excellent students (Discussion, homework, learning attitude, and other activities in class)
